# Kuaishou Video Downloader: Step-by-Step Guide

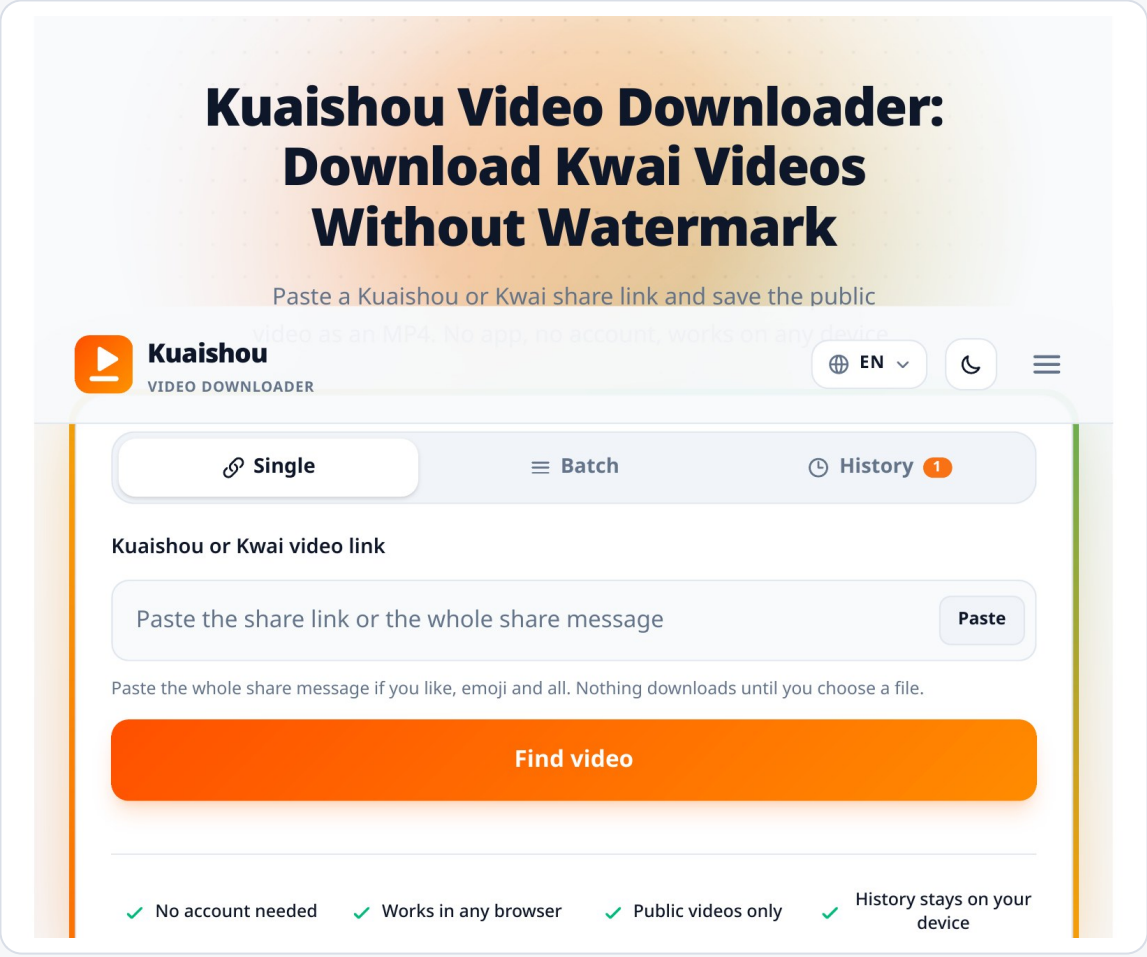

Save Kwai and Kuaishou videos without a watermark, in three easy steps.

This free guide shows you exactly how to use the Kuaishou Video Downloader at kuaishouvideodownloader.net. It works in any browser, on phone, tablet and computer. There is no app to install and no account to create, and the whole process takes under a minute. Every picture in this guide is a real screenshot of the live tool.

**You need: a public Kwai or Kuaishou video link • any browser • about one minute**

## 1 Open the tool

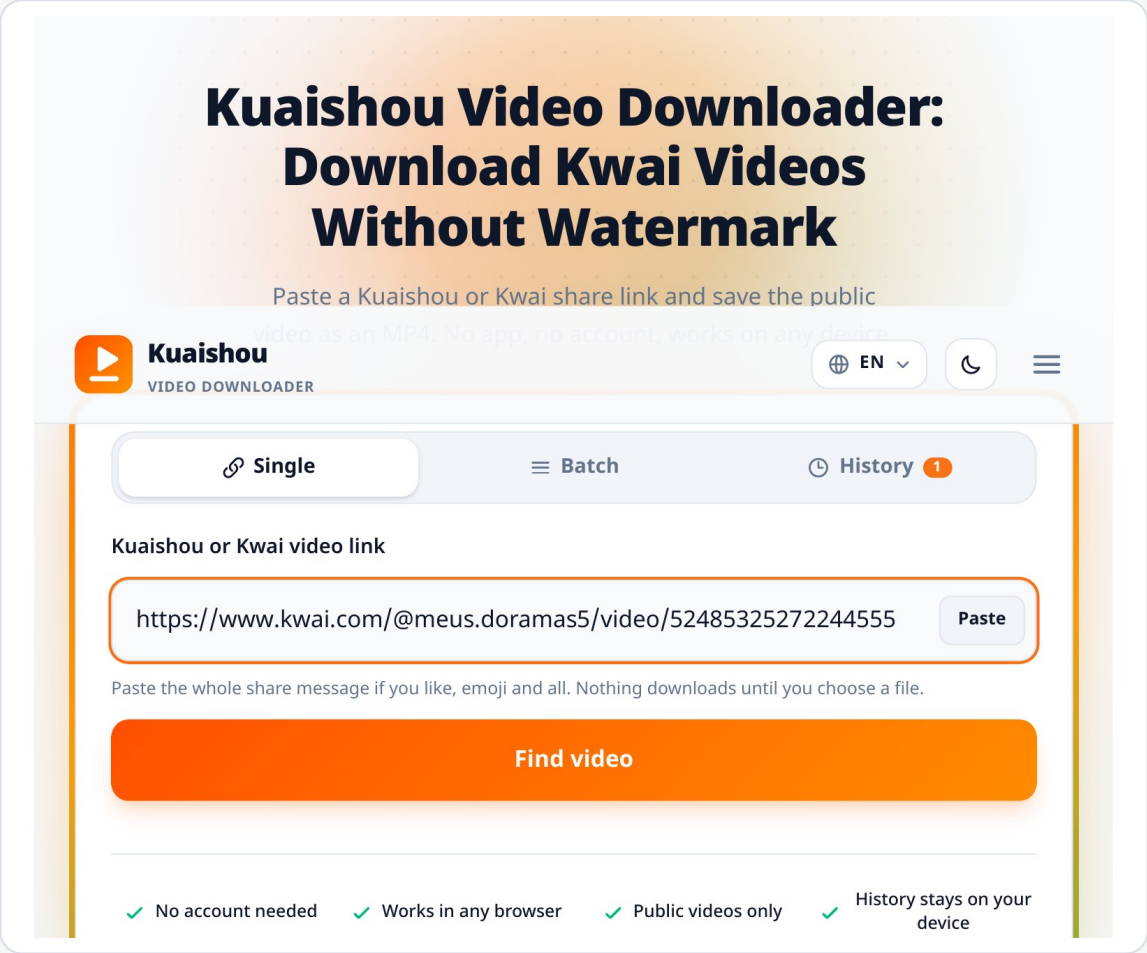

Go to kuaishouvideodownloader.net. The downloader is the box at the top of the page, ready to use. Nothing downloads until you choose a file, and your download history stays on your own device.

*Screenshot: the downloader on the homepage, ready for a link.*

## 2 Copy and paste the video link

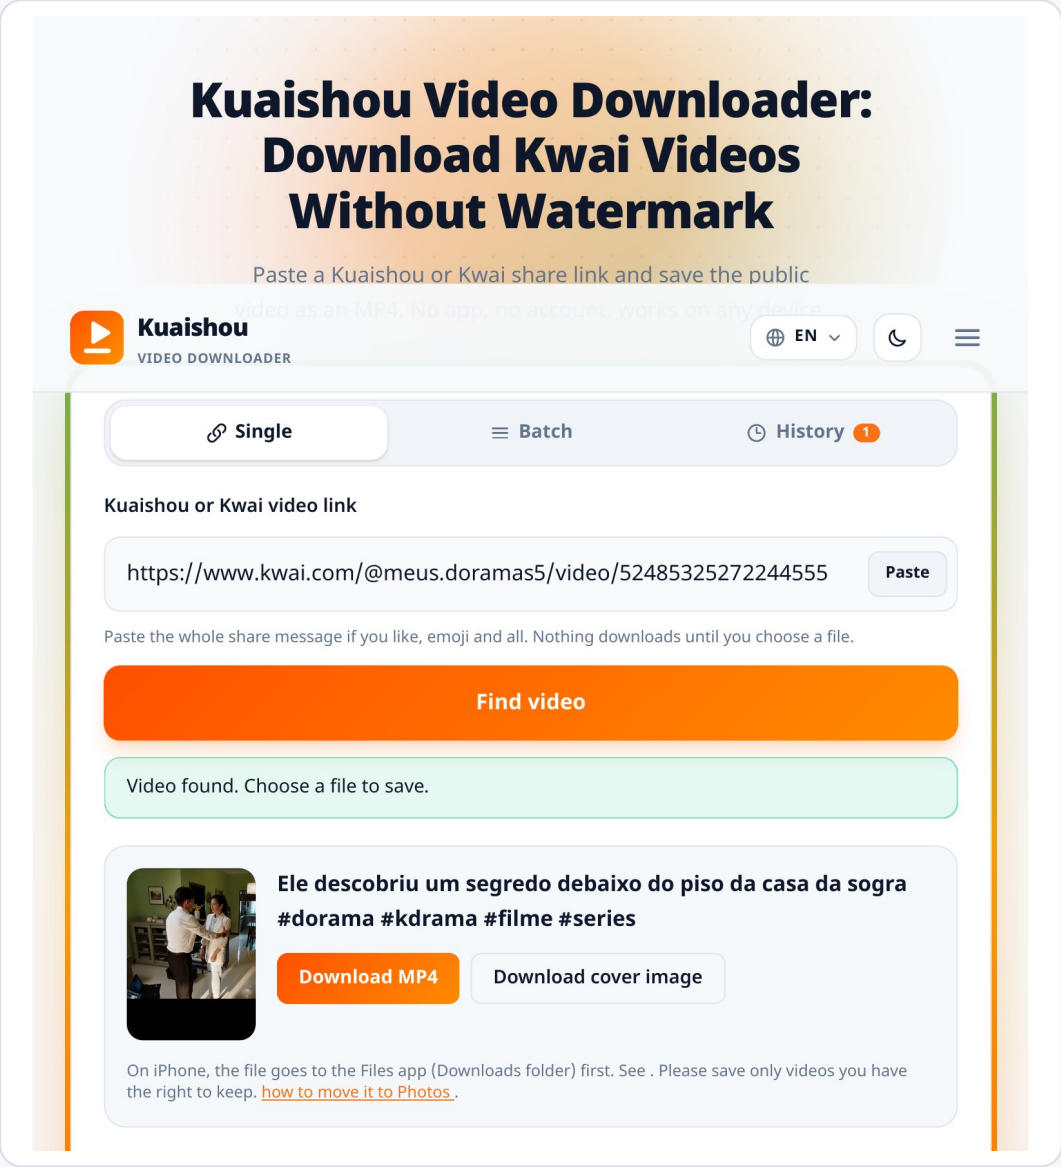

In the Kwai or Kuaishou app, open the video, tap Share, then Copy link. Come back to the tool, paste the link into the box and tap the orange Find video button. You can paste the whole share message, emoji and all, and the tool still finds the video.

*Screenshot: a real Kwai video link pasted into the box, ready to search.*

## 3 Download the MP4 or the cover image

When the tool finds the video, you see its cover and caption. Tap Download MP4 to save the video without a watermark, or Download cover image to save only the thumbnail. On iPhone, the file lands in the Files app first, in the Downloads folder, and you can move it to Photos from there.

## Good to know

- Quality: the tool saves the video at the quality the creator uploaded, up to 720p for most Kwai videos. It never adds a watermark.
- Public videos only: private videos cannot be fetched by any tool. If a link fails, copy it again from the app and retry.
- Kuaishou extras: some Kuaishou posts also offer a smaller MP4 and the soundtrack as separate downloads, depending on the post.
- Be fair: save only videos you have the right to keep, and credit the creator when you share.

## Quick answers

**Is it free?**
Yes. The tool is free, with no account and nothing to install.

**Does it work on iPhone and Android?**
Yes. It runs in the browser on any device. On Android the video lands in Downloads. On iPhone it lands in the Files app.

**Why is my video 720p and not higher?**
Kwai serves most videos at up to 720p, and the tool saves the best file the platform offers for that video.

**Try it now at kuaishouvideodownloader.net**

Free. No account. Public videos only.
